

iBEAM

GEN-AI ACCELERATORS

Elevate Your Developer Workflow

www.optisolbusiness.com

Welcome to Smarter Software Solutions

At the heart of iBeam lies a vision to revolutionize the developer workflow through intelligent automation and AI first tools. From instant design to code conversion to automated legacy codebase refactoring, and on-the-fly code documentation, our suite of solutions is engineered to drastically reduce manual effort, eliminate repetitive tasks, and accelerate delivery timelines. Whether you're building new applications, modernizing existing systems, or maintaining complex codebases, iBeam helps you scale development without scaling your team.

Design2Code

Transforming designs into code at the speed of thought.

Design2Code

D2C is a cutting-edge AI-powered tool under the iBeam accelerator that automates the conversion of design files into production-ready code for both mobile and web applications. It significantly reduces development time, minimizes manual errors, and ensures design fidelity while giving developers and designers the flexibility to customize output with styling preferences and prompt-based model interactions.

iDoc

iDoc is a cutting-edge AI-powered documentation tool designed to help developers understand and maintain their codebases with ease. Available as a Visual Studio Code extension it enables instant generation of structured, high-quality markdown documentation from your project's source code. Ideal for web, mobile, and backend development, it simplifies the documentation process, enhances collaboration, and accelerates developer onboarding without disrupting the workflow.

LangShift

The LangShift tool represents a significant advancement in modernizing legacy systems. Leveraging AI-driven conversion processes, this tool is designed to optimize and simplify migration to modern programming languages while improving overall user experience. By automating complex refactoring tasks and intelligently mapping outdated code structures to modern frameworks, LangShift reduces manual effort and minimizes the risk of migration errors. It empowers organizations to future-proof their applications with greater efficiency and confidence.
